

# The Rivet Bolt

## *for Adjustable Threshold Applications*

- ◆ Unlike traditional threshold fasteners that require a two piece connection, the rivet bolt is a one piece solution.
- ◆ The Rivet Bolt has an attractive finish with extremely high corrosive resistant properties that are maintained throughout the riveting process.

- ◆ The Rivet Bolt is installed with orbital riveting technology.
- ◆ Patent-pending design can be automated to minimize assembly time.

- ◆ Let Stafast maximize your valuable production time by designing an automation package to install the rivet bolt for you.

Stafast Products has been providing fastener solutions since 1958. The Rivet Bolt is proof again that Stafast can help you make *“The Right Connection”*®.
